

THRUSTER OVERHAUL

GREAT EXPERIENCE WITH SHORT DELIVERY AND INSTALLATION TIME!

AT ORSKOV YARD WE OFFER AN EFFICIENT PROCESS WITH ABSOLUTE MINIMUM DOWNTIME FOR THE VESSEL

At Orskov Yard, we have great experience with thrusters for all types of vessels. Overhaul of thrusters are carried out in our own workshop, by our own skilled engineers, who have many years of experience with all thruster makers.

All our docks are equipped with thruster pits, both FWD and AFT, with dimensions up to 9 x 9 meters, for easy access of retractable thrusters and bottom equipment.

For a safe and efficient operation the thrusters are lifted out with a special purpose-built crane attachment. This eliminates the need to weld up pad eyes for rigging out and reduces the man hours which then saves time and reduces docking time. At Orskov Yard we have inhouse thruster frames for support of thrusters in workshop and large workshops located next to the dry docks, equipped with overhead cranes and special tools.

INHOUSE OVERHAUL WITH:

- Skilled engineers
- Experience with all types of thrusters
- Local OEM supervision and parts
- Equipment for overhaul in workshop
- Reduced docking-time
